

MAP 3: PHYSIOGRAPHIC MAP EXERCISE

1. Using the map provided, use different colors and color in the physiographic regions that the Cherokee lived in.
2. List the physiographic regions that the Cherokee lived in. Next, use additional resources from the library, classroom, or internet and write out some of the types of plants and trees found in these regions. Hint: The Atlas of Georgia is a good place to start.

3. Using resources from your library, classroom, or internet, find out the physiographic regions that are in Oklahoma, where many of the Indians were forced to move. List 2 of the regions you found and list some of the trees and plants located in these regions. *Bonus: list three animal types found in these regions

4. Compare the physiographic regions that you listed in question 1 and 2 above. How are these areas alike? How are they different?
